Meaning and Content of Mathematics

The word **Mathematics** comes from Greek *μαθημα* (*máthēma*), meaning “knowledge” or “study” or “learning”.

It is the study of topics such as

- ▶ Quantity (numbers)
- ▶ Structure (patterns)
- ▶ Space (geometry)
- ▶ Change (analysis).

Topology: a Major Branch of Mathematics

Topology is all about **continuity** and **connectivity**, but the meaning of that will appear later.

We will look at a few aspects of Topology.

- ▶ The Bridges of Königsberg
- ▶ Doughnuts and Coffee-cups
- ▶ Knots and Links
- ▶ Nodes and Edges: Graphs
- ▶ The Möbius Band

We begin by looking at the **London Underground Map**.

Properties of a **simple closed loop**:

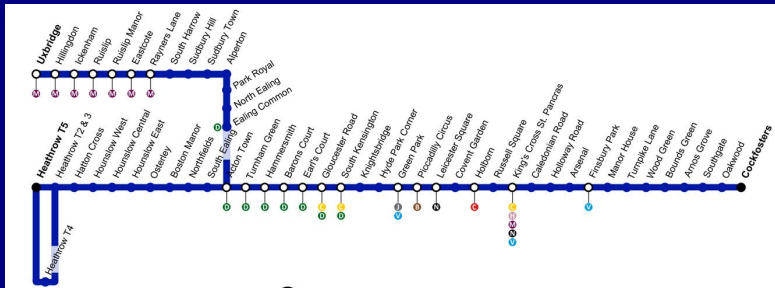

- ▶ **No branches. No travel options.**
- ▶ **Start anywhere: end up there again.**
- ▶ **Definite direction (CW or CCW).**
- ▶ **An Inside and an Outside.**

It is topologically equivalent to a circle.

Draw a (complicated) simple loop.

Topology is often called Rubber Sheet Geometry

Definition of a Topologist

Continuous distortion without tearing or glueing.

Figure : “A topologist is someone who doesn’t know the difference between a doughnut and a coffee-cup.” [Joke!]

Topological Invariance

Topology is about **Continuity** and **connectedness**.

Figure : Order of points unchanged under distortion. A bug sees only the order of the points, not the shape of the curve.

Intrinsic and Extrinsic Properties

Figure : Knot and loop are topologically equivalent, but cannot be transformed to each other without breaking and re-gluing.

Homeomorphism versus Ambient Isotopy.

A Jordan Curve

Figure : Simple closed curve divides plane into two regions.

A Jordan curve is equivalent to a circle.
It has an **inside** and an **outside**.

Closed Loops on a Torus

Figure : Two circles that intersect at just one point.

Even with these two loops, there is only one region.

On a Torus, $V - E + F = 0$

Figure : Euler's Formula for a surface with a hole.

**However distorted, there remain
2 joints, 3 edges and 3 regions.**

$$V - E + F = 2.$$

The Next Six Letters

We will consider the second group of six letters.

η θ ι κ λ μ

H Θ I K Λ Μ

Let us focus first on the **small letters**
and come back to the big ones later.

We already met the **Riemann zeta-function**; when the signs alternate, it becomes the **eta-function**:

$$\zeta(z) = \sum_{n=1}^{\infty} \frac{1}{n^z}$$

$$\eta(z) = \sum_{n=1}^{\infty} \frac{(-1)^n}{n^z}$$

Angles are very often denoted θ .

We use the term **iota** for a tiny quantity.
This comes from the Greek letter ι .

The three letters κ, λ, μ are like K, L, M
Also, μ is used for one-millionth: $1\mu\text{m}$ is a micro-meter.

The Thalassic Age

The period from 800 BC to AD 800.

Θαλασσα — the Sea.

- ▶ The first Olympic Games in 776 BC
- ▶ Homer and Hesiod lived around 700 BC
- ▶ Greek mathematics began to thrive
- ▶ First two major figures: Thales and Pythagoras.

Pythagoras (c. 570–495 BC)

Pythagoras was

- ▶ Born on the island of Samos (off Turkey).
- ▶ Philosopher, mystic, prophet and religious leader.
- ▶ Contemporary with Confucius and Lao-Tzu.

Pythagoras (c. 570–495 BC)

Pythagoras was

- ▶ **Born on the island of Samos (off Turkey).**
- ▶ **Philosopher, mystic, prophet and religious leader.**
- ▶ **Contemporary with Confucius and Lao-Tzu.**

Words philosophy (love of learning) and mathematics (that which is learned) attributed to Pythagoras.

May have been first person to imagine that natural phenomena can be understood through mathematics.

Pythagoras (c. 570–495 BC)

- ▶ **No contemporary documents**
- ▶ **Myth, legend and tradition**
- ▶ **Second or third hand accounts
often written centuries later**
- ▶ **Aristotle's biography no longer extant.**

Hardly any statement about Pythagoras uncontested.

Difficult to separate history from myth and legend.

Pythagoras (c. 570–495 BC)

- ▶ Travelled to Egypt, Babylon and perhaps India
- ▶ Mathematics, astronomy and religious lore
- ▶ Theorem on right-angled triangles
- ▶ Result known to Babylonians 1000 years earlier
- ▶ No record of a proof by Pythagoras survives.

The Pythagoreans

Around 530 BC Pythagoras moved to Croton in Magna Graecia (now Southern Italy).

He established an organization or school (philosophical/religious/political).

Both men and women were members of “The Pythagoreans”

**Adherents were very secretive:
Bound by an oath of allegiance**

Led lives of temperance; observed strict moral codes.

Pythagorean Women

“Women were given equal opportunity to study as Pythagoreans, and learned practical domestic skills in addition to philosophy.

“Women were held to be different from men, sometimes in positive ways.

“The priestess, philosopher and mathematician **Themistoclea** is regarded as Pythagoras’ teacher; **Theano**, **Damo** and **Melissa** as female disciples.”

From the Wikipedia article: [The Pythagoreans](#).

Pythagorean Quotes

- ▶ “I was **Euphorbus** at the siege of Troy.”
- ▶ “In anger, refrain from both speech and action.”
- ▶ “Educate the children and it won’t be necessary to punish the men.”
- ▶ “Abstain from beans!”

- ▶ “In anger, refrain from both speech and action.”
- ▶ “Educate the children and it won’t be necessary to punish the men.”
- ▶ “Abstain from beans!”

- ▶ “There is geometry in the humming of the strings,
There is music in the spacing of the spheres.”
- ▶ “Number rules the universe.”

Harmony & Discord

By tradition, Pythagoras discovered the principles of **musical harmony**.

Stringed instruments produce harmonious sounds when string lengths are ratios of small numbers.

Harmony & Discord

By tradition, Pythagoras discovered the principles of **musical harmony**.

Stringed instruments produce harmonious sounds when string lengths are ratios of small numbers.

Extended this idea to the heavens: planets emit sounds according to their speed of movement

Concept of the **harmony of the spheres**.

Johannes Kepler: **Harmonices Mundi**

All is Number

The motto of the Pythagoreans: *All is Number.*

All natural phenomena in the universe can be expressed using whole numbers or ratios of them.

For the Pythagoreans, numbers were *the essence and source of all things.*

All is Number

The motto of the Pythagoreans: *All is Number*.

All natural phenomena in the universe can be expressed using whole numbers or ratios of them.

For the Pythagoreans, numbers were *the essence and source of all things*.

Modern physics holds that, at its deepest level, the universe is mathematical in nature.

This view is a topic of current serious discussion (*The Mathematical Universe*, by Max Tegmark).
