Aim of the Course

AweSums

The course will run over six (6) lectures, from 5 October to 16 November.

No lecture on 26th October. So, the course splits into 3 + 3.

The aim of the course is to show you

- The great beauty of mathematics;
- Its tremendous utility in our daily lives;
- The fun we can have studying maths.

э

Meaning and Content of Mathematics

The word Mathematics comes from Greek $\mu\alpha\theta\eta\mu\alpha$ (máthéma), meaning "knowledge" or "study" or "learning".

- It is the study of topics such as
 - Quantity
 - Structure
 - Space
 - Change

Notes and Slides

- All the slides will be available online: http://mathsci.ucd.ie/~plynch/AweSums [just Google for "Peter Lynch UCD"]
- No notes are to be provided. Why Not? See next slide.
- Additional Reading Recommendations.
- Optional Exercises and Problems.
- No Assignments!
- No Assessments!
- No Examinations!

Intro

Overview

RecMath

VisMath1

DIST0

э

Why No Notes?

- Maths is NOT a Spectator Sport
- Active engagement is essential to understanding.
- You should take your own notes:

Spirals

- This involves repetition of what you hear.
- This involves repetition of what you see.
- What you write passes through your mind!
- This process is a great help to memory.

Lectures

- Classes run from 7pm to 9pm.
- 120 minutes intensive lecturing too long (both for you and for me).
- Educational Theory:
 - Attention & retention both decrease with time.

Symmetry

- Class will be broken into short sections.
- If you cannot attend a class:

Spirals

- Please do not bother to email me.
- There is no need to give any reasons.
- The presentation slides will be available.

э

"Typical" Structure of a Class

- 1. Problem: Background and Theory
- 2. Distraction (10 min)
- 3. Some History of the problem
- 4. Another Distraction
- 5. Exercises, Puzzles, History
- 6. Questions & Discussion

Total duration: about 120 minutes.

I will (normally) be available after classes to answer questions or offer clarifications.

Intro

Phi

Symmetry

RecMath

VisMath1

Some Distractions

- Visual Awareness: Maths Everywhere
- Puzzles: E.g. Watermelon Puzzle
- Sieve of Eratosthenes
- The Greek Alphabet
- Lateral Thinking in Maths
- Lecture sans paroles
- How Cubic and Quartic Equations were cracked
- Four-colour Theorem
- Online Encyclopedia of Integer Sequences

It's Your Course

I expect a group with a wide range of knowledge and "mathematical maturity".

Everybody should benefit from the course.

If anything is unclear, SHOUT OUT! or whisper!

If something is missing, let me know.

Spirals

Feedback on the course is very welcome.

Phi

Symmetry

BecMath

It's Your Course

Classes begin at 7 pm. and run till 9 pm.

There seem to be two options:

- Break at 7:50 for 10, 15 or 20 minutes.
- Don't break at all !!!

Spirals

I have no strong views but I suspect that there might be a riot if we do not have a break.

Symmetry

BecMath

Let's have a poll: Who wants a break?

Golden Ratio and Fibonacci Numbers

The Golden Ratio is a number defined as

$$\phi = \frac{1 + \sqrt{5}}{2} \approx 1.618.$$

It is intimately connected with the *Fibonacci Numbers*.

Fibonacci Numbers

The Fibonacci sequence is the sequence

 $\{0, 1, 1, 2, 3, 5, 8, 13, 21, 34, 55, 89, 144, \dots\}$

where *each number is the sum of the previous two.* The Fibonacci numbers obey a recurrence relation

$$F_{n+1}=F_n+F_{n-1}$$

with the starting values $F_0 = 0$ and $F_1 = 1$.

The explicit expression for the Fibonacci numbers is

$$F_n = \frac{1}{\sqrt{5}} \left[\frac{1+\sqrt{5}}{2} \right]'' - \frac{1}{\sqrt{5}} \left[\frac{1-\sqrt{5}}{2} \right]''$$

$$(1-\sqrt{5})^{(n)} = \frac{1-\sqrt{5}}{2} \left[\frac{1-\sqrt{5}}{2} \right]''$$

$$(1-\sqrt{5})^{(n)} = \frac{1-\sqrt{5$$

Fibonacci Numbers

Let's consider the sequence of ratios of terms

$$\frac{1}{1}, \ \frac{2}{1}, \ \frac{3}{2}, \ \frac{5}{3}, \ \frac{8}{5}, \ \frac{13}{8}, \ \frac{21}{13}, \ \frac{34}{21}, \ \dots$$

The ratios get closer and closer to the golden number:

$$\frac{F_{n+1}}{F_n} \to \phi \quad \text{as} \quad n \to \infty$$

Intro

Overview

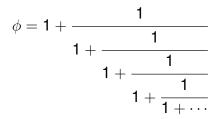

Phi

Symmetry

RecMath

Exotic Expressions for ϕ

We can write ϕ as a *continued fraction*

We can also write it as a continued root

$$\phi = \sqrt{1 + \sqrt{1 + \sqrt{1 + \sqrt{1 + \cdots}}}}$$

These extraordinary expressions are actually quite easy to demonstrate!

Ubiquity and Beauty of Symmetry

Symmetry is all around us.

- Many buildings are symmetric.
- Our bodies have bilateral symmetry.
- Crystals have great symmetry.
- Viruses can display stunning symmetries.
- At the sub-atomic scale, symmetry reigns.
- Galaxies have many symmetries.

Symmetry and Group Theory

Symmetry is an essentially geometric concept.

The mathematical theory of symmetry is algebraic.

The key concept is that of a group.

A group is a *set of elements* such that any two elements can be combined to produce another.

Instead of giving the mathematical definition, I will give an example to make things clear.

Visual Maths Proofs

Can the sum of an infinite number of quantities have a finite value?

Let's look at the infinite series

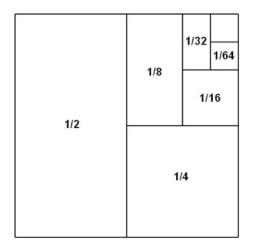

$$S = \frac{1}{2} + \frac{1}{4} + \frac{1}{8} + \frac{1}{16} + \cdots$$

Each term is half the size of the preceding one.

The terms are getting smaller but it is *not obvious* that the series converges.

A picture makes everything clear:

Intro

Overview

Spirals

Phi

Symmetry

RecMath

VisMath1

b. 4 To b

Conclusion

The infinite series

$$S = \frac{1}{2} + \frac{1}{4} + \frac{1}{8} + \frac{1}{16} + \cdots$$

has a finite sum:

$$\frac{1}{2} + \frac{1}{4} + \frac{1}{8} + \frac{1}{16} + \dots = 1$$

The terms are getting smaller quickly enough for the series to be convergent.

b. 4 To b

VisMath1

Intro

Overview

Phi

Symmetry

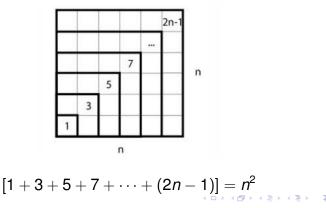

RecMath

Another Simple Proof

What is the sum of the first n odd numbers?

$$1=1^2 \qquad (1+3)=4=2^2 \qquad (1+3+5)=9=3^2$$

Is this pattern continued? Can we prove it?

Intro

Overview

Phi

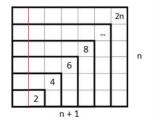

Symmetry

RecMath

VisMath1

What is the sum of the first *n* even numbers?

$$S=2+4+6+8+\cdots 2n$$

We just add a column on the left. This increases each term of the sequence of odd numbers by 1.

$$[2+4+6+\cdots+2n] = n(n+1)$$

Now divide both sides by 2 to get:

$$[1+2+3+\cdots+n] = \frac{1}{2}n(n+1)$$
